Glass bottles

Made mainly of silica sand.
The sand melt in a furnace.
How to make glass bottles

When the glass bottles are filled
and used and then the bottles
go to the shop to sell it.

Collect old glass bottles,
these old bottles are given
to a recycling plant. Tops
and lids are removed.
Crash in small pieces

Then in the factory is mixed
with a small amount of silica.
It is melted, in lower temperature

The hot liquid glass is pulled in a mold
to give her form.
And then is a pure and strong new
glass
